Our Mission:

Act as an extension of your business. Unlike some third-party logistics providers' off-the-shelf approaches, Kuehne + Nagel believes efficient, responsive logistics must be custom-created to meet your specific business requirements.

Kuehne + Nagel, one of world's leading logistics companies, focuses on specialized service areas to provide clients with the right people and infrastructure to handle virtually any aspect of their logistics operations:

- **Supply Logistics.** Provides supply-side solutions and value-added services for the high-tech industry. Our services reduce inventory and associated fulfillment costs.
- **Warehousing Solutions.** Network of 40 dedicated and shared (multi-client) distribution centers is the broadest in North America. Our warehouse systems and processes ensure the highest level of operational efficiency.
- **Transportation Management.** Non-asset-based approach to transportation. This objective approach allows us to optimize your distribution, choosing carriers that maximize service and drive value for you.
- **Critical Service Logistics.** After-sale support for a number of leading high-tech customers. We have played a key role in the development of Sun Microsystems Logistics Virtual Network, which integrates a customer contact center, remote stocking locations and information systems to link supply chain partners.

Our customer-centric solutions build on our proven warehouse management capabilities. The result: a seamless single-source solution for all your logistics needs.

It's why some of the world's largest and most respected healthcare, technology and retail companies – including Nortel Networks, Sun Microsystems, Hoffman-LaRoche, Allergan and Wal-Mart – use Kuehne + Nagel solutions to gain a competitive advantage.
